Education

2009 – present	National University of Singapore
	Computer Science
	Specialization in Programming Languages
2002 – 2008	St Thomas's Secondary School, Kuching, Malaysia
	Natural Sciences stream

Non-Academic Activities

2012	Software Engineering Intern at Viki
2011 – present	President at NUS Hackers
2011 & 2010	Speaker at Books in Browsers, Internet Archive, SF
2009	Founder, Pandamian.com (digital publishing startup)
2006	Founder, Novelr.com

Portfolio

2012: Software Engineering Intern, Viki
Spent 3 months working with Viki's engineering team on Viki.com. Contributed to the Viki V3 API, wrote the majority of Viki's V3 API documentation, created the V3 API gem and built their deployable partner site project. Also proposed and worked on a side-project to increase A/B testing on Viki.com's primary site.

2011 - 2012: NUS Hackers
Redesigned and rebuilt nushackers.org on top of Wordpress. Built an API for National University of Singapore courses (api.nushackers.org) with Python, MongoDB and Flask in 4 days. Built and released treehouse.nushackers.org *(currently dead)*, a Django-based community code tracker site in 6 days.

2010 – 2011: Pandamian.com
Built Pandamian.com, a digital publishing startup *(currently inactive).* Built using Django, Python, and PostgresSQL. Also forked and maintained the Django epub converter app (https://github.com/shadowsun7/epub-creator).

2006 Novelr.com
Created Novelr.com, a publishing blog focused on web-based ebook standards and best-practices. My work at Novelr.com led to invitations to speak at Books in Browsers, an invitation-only conference for book technologists held at the Internet Archive in 2010 and 2011.

Skills:

Programming Languages:
Proficient: Python, Ruby, Javascript, Java
Intermediate: Go, PHP
Basic: C, Haskell

Languages:
Native in English
Fluent in Malay
Intermediate in Chinese
